SIGNAL ISOLATOR & POWER DISTRIBUTOR

信号絶縁 変換器 & 傳送器用 電源

This instrument is a high and accurate converter that provides all transmitters such as pressure transmitter, flow and overvoltage protection circuit inside with power supply and signal conversion.

It is totally isolated between input signal from transmitter and output signal of a converter so it does not need extra isolator when the loop is contracted.

R.T.D CONVERTER

測溫抵抗體 變換器

This instrument is a high and accurate converter that receives RTD as an input signal then converts resistance variations into DC voltage and DC current output signal following the temperature. Also the feed back circuit developed by our company actualized high accurate linearization and compensation of line resistance.

POTENTIOMETER CONVERTER

可變抵抗變換器

This instrument is a high and accurate converter that receives resistance signals of 3 wires potentiometer ($100\Omega \sim 100k\Omega$) and converts them into DC voltage and current. Especially, it is widely used for float type water level detector, and mutual interference by Zero adjustment and Span adjustment is hardly occurred.

SIGNAL ISOLATOR

信号絶縁 変換器

This instrument receives DC voltage and current as an input signal and provides conversion output when the input & output is separated completely. It especially selects 3ways isolation circuit of which input and output are separated by transformer and power and input/output by transformer.

It is a high and accurate converter that is suitable to protect a pulse noise and a high peak voltage demanded in a computer interface and field instruments.

MANUAL SETTER

手動 設定器

This is a manual operator that performs safe control by combination when there is no remote setting and manual function in automatic controller by setting switch.

This is a high and accurate converter that setting output is generated as DC voltage and current.

HIGH / LOW SETTER

上下限 警報器

This is a converter that receives DC voltage and current as inputs transmitted from field instrument or regulator, and then generates an alarm occurred by a point of contact output by an establishment of maximum and minimum values.

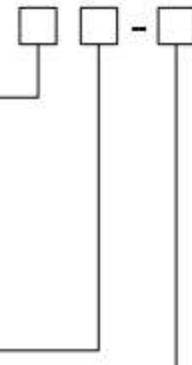

It is used for effective interlock according to the process condition.
